

MagSafe & MagSafe 2 Cable

The **MagSafe Cable (MagSafe 2 Cable)** is a meter and half long cable which can be used to charge your Macbook® with the PowerCases Laptop Charger.

The main difference is the appearance between the two, in that the Magsafe 2 connector has a thinner connecting piece. Any MacBook that was made from mid 2012 onward uses the newer Magsafe 2 connector.

Below are images of MagSafe Cable, available from www.powercases.com
